

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method for receiving files sent by a central server to an audiovisual data reproduction system[[,]] managed by an operating system and linked to the server[[,]] using a data transfer link, the ~~process~~method comprising:

- ~~initialising~~initializing a link between the central server and an audiovisual data reproduction system,
- opening a reception file on a storage area of said audiovisual data reproduction system, said storage area being a permanent storage area having an available memory of a specified minimum size for storing a file to be sent by the central server,
- receiving each packet of said file sent by the central server and storing said packet files sent by the central server on said storage area of the audiovisual data reproduction system, each file ~~comprising specified~~having information representative of ~~the a type of data contained in~~associated with the file, ~~a specific reception function being associated to each received file,~~
- for each file received, searching, for each file received, a specific for a reception function specific to said received file to be associated with each received file based at least in part on the , this search step being carried out by the specified information representative of the type of data ~~contained in~~associated with the file, and

- processing each file by the corresponding reception function, the processing comprising copying the file received ~~to a specified~~ in the storage area to update a database of the audiovisual reproduction system according to the data included in the received file.

2. (Cancelled)

3. (Cancelled)

4. (Currently Amended) The method of claim 1, wherein the search step is activated when the last data packet ~~corresponding to a whole of the~~ file is stored in ~~memory~~ the storage area.

5. (Currently Amended) The method of claim 1, wherein the ~~specified~~ information representative of the type of data comprises the file extension and/or the name of the file received.

6. (Currently Amended) The method of claim ~~[[3,]]~~ 1, wherein when the ~~specified~~ information representative of the type of data represents a song file, the database update step comprises at least one of the following steps:

- checking the compatibility of the version of the song file with a version of an operating system of the audiovisual data reproduction system,

- updating a file stored on the audiovisual data reproduction system ~~containing the identification of~~ that identifies all the songs stored on the audiovisual data reproduction system,

- updating a statistics table in the database making it possible to determine a selection frequency of the song corresponding to the file stored in memory,
- updating a purchase table containing the number and name of all the songs purchased for the audiovisual data reproduction system, and
- updating a counter of songs that can be selected to check that the number of songs that can be selected is not greater than a specified threshold.
